

$$P_{12}(\vec{q}) \propto \left| \vec{A}_{12}(\vec{q}) \cdot \hat{n} \right|^2$$

The diagram illustrates the relationship between the polarization vector $\vec{A}_{12}(\vec{q})$ and the scattering vector $\vec{q}$. A red circle represents the polarization vector $\vec{A}_{12}(\vec{q})$, with blue arrows indicating its direction. A vertical line represents the scattering vector $\vec{q}$. The angle between the polarization vector and the scattering vector is labeled θ_{PM} .
