

$$P_{12}(\vec{q}) \propto \left| \vec{A}_{12}(\vec{q}) \right| \cdot \left| \text{PM} \right|^2$$

The diagram illustrates the components of the equation. On the left, a red circle represents a vector field $\vec{A}_{12}(\vec{q})$, with blue arrows pointing radially outward from its center. This circle is enclosed within a vertical black bar. To the right of this bar is a dot, followed by another vertical black bar. Inside this second bar is a gray double-headed vertical arrow labeled 'PM', with a curved line above it indicating a phase or path. To the right of this second bar is a superscript '2'.
